

Modifying Existing Observations

SLU DSS 7: Data Wrangling in R
February 20, 2019

Find Seminar Resources at:
<https://github.com/slu-dss>

The repository for this week is called [wrangling-03](#). To get started, head to the url above, find the repository, and open it. Scroll down the page to the README file, and use the package installation code if you weren't here last time or are at a new computer. Everyone should use the second code snippet to access today's materials. When you execute the second code chunk, have the data moved to your Desktop and feel free to delete the .zip file (it will ask if you want to do these things). Let us know if you need a hand!

Agenda for Seminar 03:

- Reading data into R (recap)
- Subsetting columns (recap)
- Subsetting observations
- Reordering observations
- Taking random samples

Extra resources: We'll post links to some extra resources for getting started with functions in the [README.md](#) file in this week's repository.

Next date: Wednesday, March 6th (1pm to 2pm)
